

CHALLENGE

- Enable the client to run Discover, Scramble, DDM and Monitoring across multiple data sources and on multiple environments

DRIVERS

- Test data management, insider threat and access management

MENTIS SOLUTION

- Customer required a product that was mature and could be used by DBAs with minimal support from MENTIS.
- Our product was the only product that met the requirements.
- MENTIS was also the only product that had such a wide variety of supported data sources and environments. The customer currently uses MENTIS for Discovery and Scramble of their SQL and Oracle databases.
- MySQL on AWS Aurora is in the pipeline, along with a file server implementation

SUCCESS STORIES

- MENTIS Discovery was able to find Credit card information using the “Pattern Match: Validated with functions” pathway. The customer was unaware of such data existing on their DBs
