

CHALLENGE

- Protect PII data of employees and consultants stored in critical PeopleSoft (HR and Finance) and JD Edwards and other ERP solutions.
- Complex role specific and designation specific masking (DDM).
- Monitor all connections and statements executed by each user on sensitive data – Specific set of alerts and configurations based on customer access etc. based on user etc.

DRIVERS

- Protecting employee data
- Controlling access of sensitive data depending on the role & functions of employees

MENTIS SOLUTION

- Successful implementation of discovery, DDM in 6 applications in scope
- MENTIS found more than 1650 sensitive tables in 6 applications
- Over 80 proprietary algorithms – masking, tokenization and encryption
- 17 data classification and masking methods

SUCCESS STORIES

- Results of MENTIS discovery being used in data classification project.
- Currently in talks for a global implementation
