

A FINANCIAL SERVICES SOFTWARE MANUFACTURER

CHALLENGE

- They receive data from a wide range of financial institutions in their in-built app.
- The challenge was to be able to quickly deploy a masking process prior to consuming customers' data in a wide range of application formats.
- Required a solution that is compatible with Oracle, Mainframe, SQL Server, MySQL, CSV files and Excel.
- the scrambling process had to be completed very rapidly and with little or no manual intervention.

DRIVERS

- Protecting their customers' sensitive data and personally identifiable information (PII)

MENTIS SOLUTION

- adaption to any application across all database types and file formats and to do this in an automated process that was efficient and fast.
- MENTIS was able to successfully meet all criteria's and complete the Proof of Concept (POC)
- information generated by the discovery process was used to mask sensitive data at both file levels and database level.
- The customer deployed iDiscover-Locations™, iScramble™ and iMask™ for Databases

SUCCESS STORIES

- Comprehensive discovery and data classification across many different database types were primary factors in the selection of MENTIS Sensitive Data Discovery™.
