

TOP MEDICAL DEVICES MANUFACTURING COMPANY

CHALLENGE

- Out of the box plus custom data classifications such as Patient ID, User ID etc.
- Find ALL sensitive data across SQL Server and Files and masked data that is real-like and not hashed values
- Complex data fields with data quality issues where the customer had no control over the incoming data
- Referential integrity and consistency

DRIVERS

- Cross-border data security

MENTIS SOLUTION

- MENTIS was able to find various data classification like patient ID with no patterns
- Maintained data consistency across data sources, formats.
- Maintained referential integrity
- Optimized performance with minimal run time impact by creating masking methods using repositories

SUCCESS STORIES

- Large volumes of data (48 TB in 1 production server) were handled successfully with optimized performance
