

CANADIAN LOGISTICS AND UTILITIES COMPANY

CHALLENGE

- Oracle EBS masking
- Mask salary details where some need to be available to public and some need to be masked, based on a specific location and position in the organization.

DRIVERS

- Location-aware and user group-based masking
- Inefficiency of their home grown DDM methods

MENTIS SOLUTION

- MENTIS implemented iDiscover-code (iCatalog) scanned all their Oracle forms and reports to find sensitive data locations and then masked that on the application screen
- Conditional masking was implemented.

SUCCESS STORIES

- Successfully completed discovery and masking on a complex application like Oracle EBS (5000 primary screens and about 30,000 child screens)
